

**Postdoctoral Fellow**  
**Applications of Spatial Light Modulators**  
University of Louisville, Louisville, KY

There is an immediate opening for a Postdoctoral Fellow in The ElectroOptics Research Institute & Nanotechnology Center ([www.ee.louisville.edu/~eri](http://www.ee.louisville.edu/~eri)) on applications of liquid crystal and micromirror Spatial Light Modulators (SLM). Projects involve multispot laser beam steering, laser trapping, 3D object scanning and hypertemporal imaging. PhD scientists and advanced level graduate students with strong fundamental backgrounds in optics are invited to apply. Special training in optical signal processing, holography, computer-control of SLM's or microoptics would be considered a plus. *Some projects require American citizenship.* To apply, send a single pdf file including CV plus contact information of three references to [Bhfac01@uofl.edu](mailto:Bhfac01@uofl.edu).
